SUMMARY

Final-year B.Tech CSE student and AWS Certified Solutions Architect who builds complete, tested software: Android systems tooling, backend APIs and cloud automation. Top 24 of 2,000+ teams at Cognizant Technoverse 2026.

EDUCATION

JECRC University, Jaipur *Aug 2023 – Jul 2027*
B.Tech in Computer Science Engineering (AWS Cloud Specialization) *CGPA: 8.2/10*

EXPERIENCE

Software Engineering Intern, SecretEye Telematics (early-stage startup) *Dec 2025 – Mar 2026*

- Built the team's internal operations app (Tauri, React, TypeScript) on an Express.js and MongoDB backend, bringing CRM, HR and finance tracking into one dashboard and **replacing 4 separate spreadsheets**.
- Wrote **20+ REST APIs** over **6 MongoDB collections**, plus scripts that collect posts from Reddit, Instagram, LinkedIn and X into the database for market research, replacing manual copy-paste.

Technical Lead, AWS Cloud Club, JECRC University *Sep 2023 – Present*

- Automated student lab setup (EC2, S3, IAM) with Python Boto3 scripts instead of manual console work.
- Ran hands-on AWS and Git workshops for **1,000+ students** at campus events and hackathons.

PROJECTS

Anvil – bootable USB maker for Android | *Kotlin, Jetpack Compose, USB Host API* GitHub | *Nov 2026*

- Built an Android app that makes a bootable Windows or Linux USB drive with **no PC and no root**. Android blocks raw disk writes, so the app talks to the drive directly using the USB Mass Storage protocol.
- Windows' 7+ GB `install.wim` cannot fit on FAT32 (4 GB file limit), so I wrote a splitter that streams it from the ISO into smaller `.swm` parts, along with my own GPT partition and FAT32 writers.
- Reads back and SHA-256-verifies every write; a Windows 11 drive image written by the app boots in a UEFI virtual machine with **Secure Boot on**. Core logic is unit-tested against a simulated USB drive.

MediFast RX – Telegram medicine finder | *TypeScript, Node.js, SQLite* GitHub | *Apr 2026 – Present*

- Built a Telegram bot where a customer sends a medicine list and location; the request goes to up to 12 nearby pharmacies at once, pharmacists reply in one tap, and the customer's message updates live.
- Matches medicines by exact name, strength and form, so Pan 20 never becomes Pan 40; fuzzy search only suggests. All rules live in one module on SQLite, covered by **43 automated tests** run in CI.
- Started as MediFast AI, a team prototype searching **169K+ Indian medicines** with typo and Hinglish support, which reached the **Cognizant Technoverse 2026 Grand Finale (Top 24 of 2,000+ teams)**.

Yatra Sync – shared-cab matching and fare split | *Next.js, TypeScript, SQLite* GitHub | *Oct 2026*

- Built a web app that groups people travelling the same way into one cab. Matching runs shortest paths on a road graph and checks departure time, detour, waiting time and seats before suggesting a group.
- Splits the fare by each rider's distance and seats, exact to the paisa, so nobody pays more than their solo fare. Tested with **138 unit/integration tests** (Vitest) and 9 browser tests (Playwright).

Placify AI – placement prediction (team project) | *Python, CatBoost, FastAPI* GitHub | *Feb 2026*

- Trained a CatBoost model on **5,000+ student records** to predict placement, reaching **84.7% accuracy** and **94.5% ROC-AUC**, ahead of SVM and logistic-regression baselines, served through FastAPI.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Kotlin, Java, C++, SQL
Backend & Web: Node.js, Express.js, FastAPI, React, Next.js, REST APIs, Telegram Bot API
Databases & AI: MongoDB, PostgreSQL, SQLite, ChromaDB (RAG), CatBoost, scikit-learn
Cloud & Tools: AWS (EC2, S3, IAM, CloudWatch), Boto3, Docker, Git, GitHub Actions, Linux, Tauri

ACHIEVEMENTS & CERTIFICATIONS

- **Cognizant Technoverse 2026:** Grand Finalist with MediFast AI, Top 24 of 2,000+ teams nationwide.
- **AWS Certified:** Solutions Architect – Associate [Verify], AI Practitioner [Verify], Cloud Practitioner [Verify]
- **ServiceNow Certified System Administrator (CSA)** [Verify]
- **Smart India Hackathon 2024:** Top 10 in prelims | **250+ problems** solved on LeetCode and Codeforces
- **Beyond coursework:** Ran a side business selling Windows and Microsoft Office licence keys; made YouTube tech tutorials in 2017 (about 6,000 views); national-level badminton player (2019).
