Summary

Final-year B.Tech CSE student (2027 batch) and **AWS Certified Solutions Architect – Associate**. Builds backend APIs with Node.js and TypeScript and automates AWS with Python. Built a company dashboard during a software engineering internship that replaced 4 spreadsheets. Creator of MediFast AI, **Top 24 of 2,000+ teams** at Cognizant Technoverse 2026. Seeking a Software Engineer / Graduate Engineer Trainee role.

Education

JECRC University, Jaipur *Aug 2023 – Jul 2027*
B.Tech in Computer Science Engineering (AWS Cloud Specialization) *CGPA: 8.2/10*

Technical Skills

Languages: Python, JavaScript, TypeScript, Java, C++, SQL
Backend & Web: Node.js, Express.js, Next.js, React, REST APIs
Databases: MongoDB, PostgreSQL, SQLite, ChromaDB (vector DB)
Cloud & Tools: AWS (EC2, S3, IAM, CloudWatch), Boto3, Git, Linux, Docker (Basics)
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Experience

Software Engineering Intern *Dec 2025 – Mar 2026*
SecretEye Telematics

- Built an internal web dashboard (React, TypeScript, Express.js, MongoDB) for CRM, HR and finance tracking, replacing **4 separate spreadsheets** used by the team.
- Wrote **20+ REST APIs** (create, read, update, delete) over **6 MongoDB collections**, used by the dashboard to save and fetch company data.
- Automated basic market-research data collection into the database, removing a manual copy-paste task.

Technical Lead *Sep 2023 – Present*
AWS Cloud Club, JECRC University

- Wrote Python (Boto3) scripts that create EC2 instances, S3 buckets and IAM roles for student labs automatically, instead of setting each one up by hand in the AWS console.
- Ran hands-on AWS and Git workshops for **1,000+ students** at campus events and hackathons.

Projects

MediFast AI – Telegram medicine assistant *Apr 2026*
Node.js, Express.js, MongoDB, Fuse.js, ChromaDB, Llama LLM (Groq API), Telegram Bot API [GitHub]

- Built a Telegram bot that searches a catalog of **169K+ Indian medicines** and handles spelling mistakes and Hinglish (e.g. "bukhar ki tablet").
- Used fuzzy search (Fuse.js) to find the closest medicine name, then a small RAG pipeline (ChromaDB) so the LLM answers only from verified data.
- Showed nearby pharmacies sorted by distance from the user's live location, using OpenStreetMap data and MongoDB geo-queries (`2dsphere`).
- Added a safety filter that removes any dosage advice the LLM writes, and wrote **350+ automated tests** (Node.js test runner).

Yatra Sync – Shared cab ride and fare-split app *Oct 2026*
Next.js, React, TypeScript, SQLite, Drizzle ORM, Zod, Vitest, Playwright [GitHub]

- Built a web app that helps people find co-travellers going the same way (office, station, airport) and share one Ola/Uber cab, with group invites, rider consent and group chat.
- Wrote a matching algorithm on a road graph (shortest path) that groups riders by departure time, detour, waiting time and seat capacity.
- Split the fare by each rider's distance and seats, exact to the paisa, so no one pays more than their solo fare.
- Tested with **138 unit/integration tests** (Vitest) and **9 end-to-end browser tests** (Playwright), and benchmarked the matching on simulations of 25–200 ride requests.

Certifications & Achievements

- **AWS Certified:** Solutions Architect – Associate [Verify], AI Practitioner [Verify], Cloud Practitioner [Verify].
- **ServiceNow Certified System Administrator (CSA).**
- **Cognizant Technoverse 2026:** Grand Finale, Top 24 of 2,000+ teams nationwide with MediFast AI.
- **Smart India Hackathon 2024:** Prelims Top 10 Finalist.
- Solved **250+ problems** on LeetCode and Codeforces. National-level Badminton Player (2019).
